

MATLAB 2020a

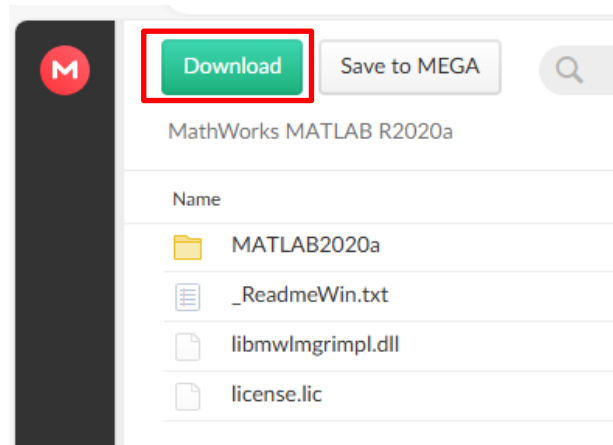

INSTALLATION GUIDE

Disclaimer: **This guide was made and should be used for Educational Purpose only**

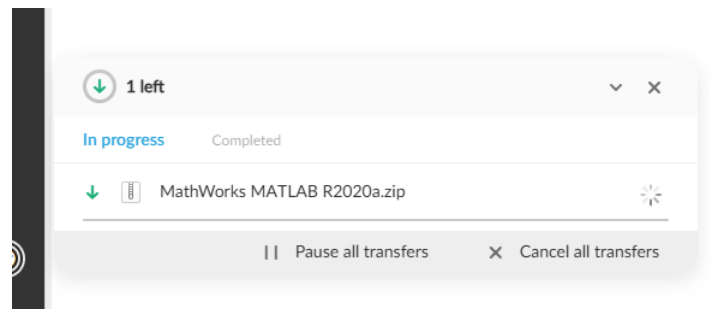

1. Download the MATLAB 2020a files from the MEGA cloud storage.(availability may vary after 2-3 years)

Link: https://mega.nz/folder/FPcBAKaC#bMcHBr6O3gqB_SCbMD-_0g

2. Open the link and click on download

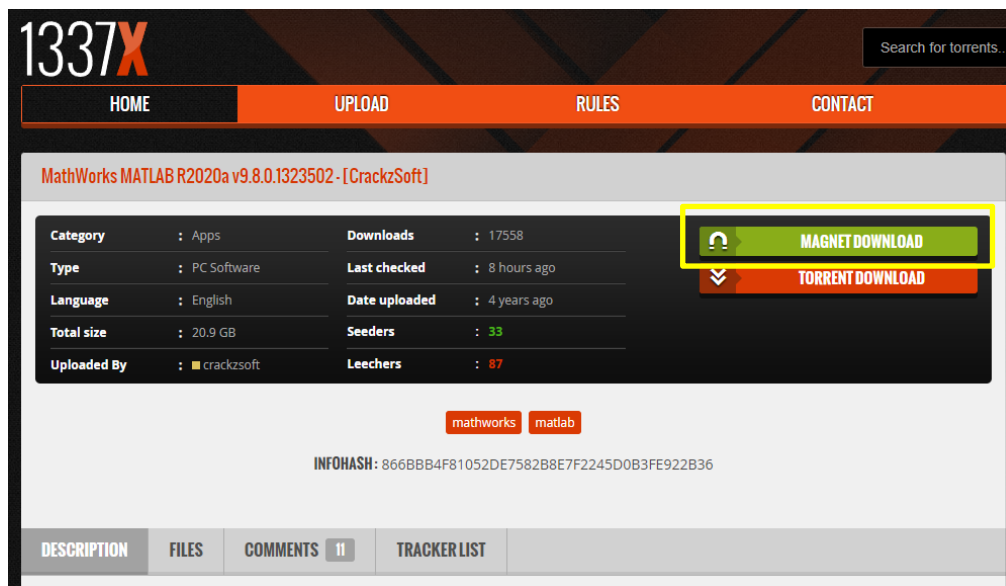

3. Download should start

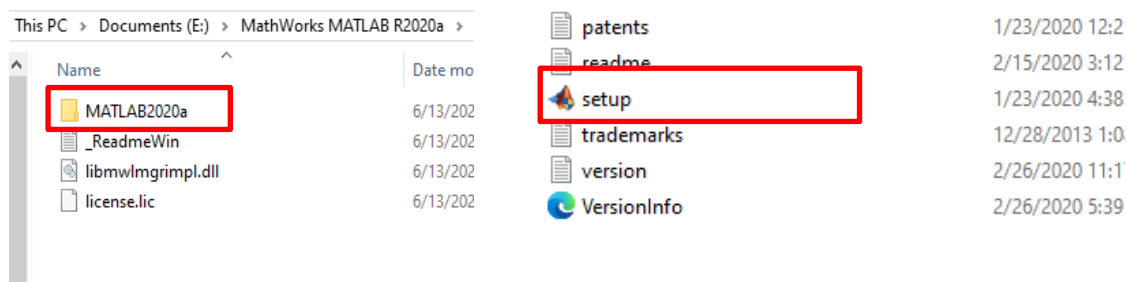

Or, if you want to download it from torrent, you can use this link:

<https://1337x.to/torrent/4377708/MathWorks-MATLAB-R2020a-v9-8-0-1323502-CrackzSoft/>

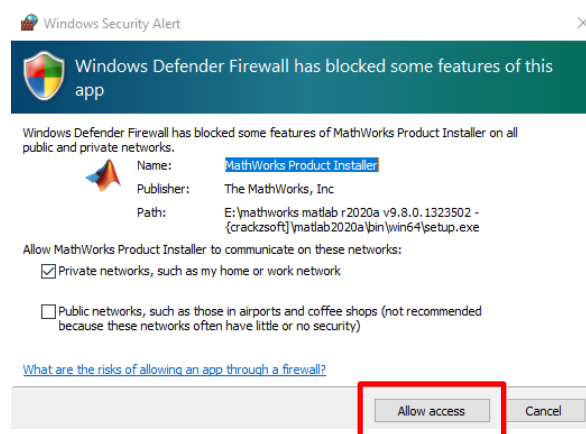

You'll need a torrent client such as uTorrent or qbittorrent. The open the link and use the magnet download options.

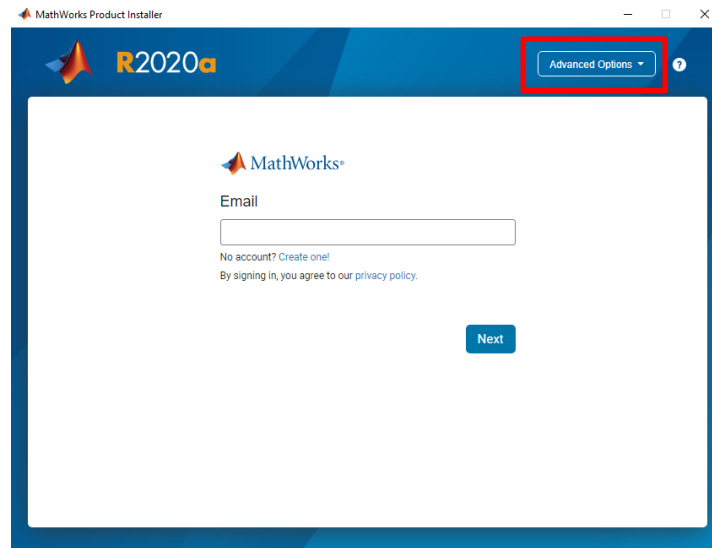

4. After downloading, unzip the file (if you have downloaded it from torrent, then no need to unzip it). Then open the MATLAB 2020a folder and find setup.exe and double click it. (If you downloaded it from the torrent, you will see an ISO disc file, open it, find setup and double click it to run)

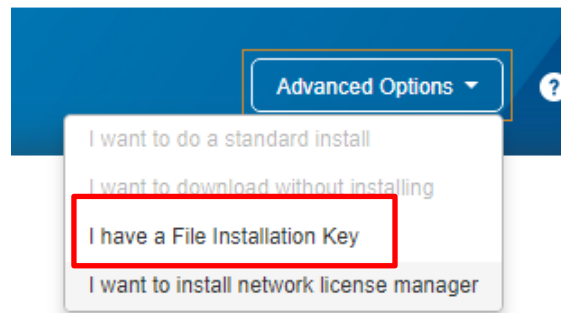

5. (only if it asks) if it asks for a windows firewall and network access, allow it.

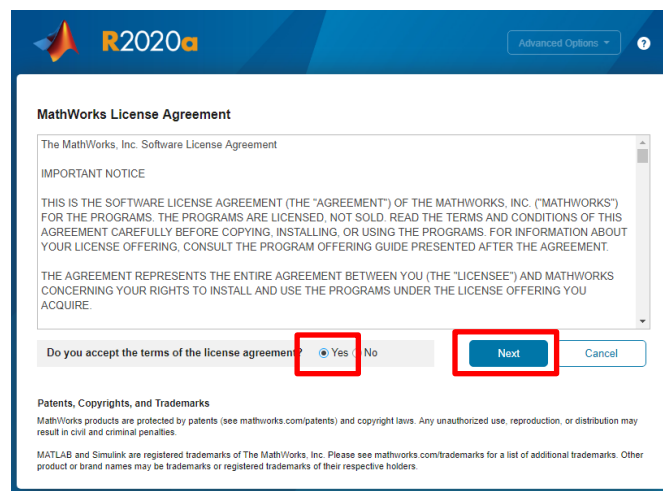

6. After you run the setup.exe, it will show a window. Navigate to the top right corner where it says “Advance Option”, and click it

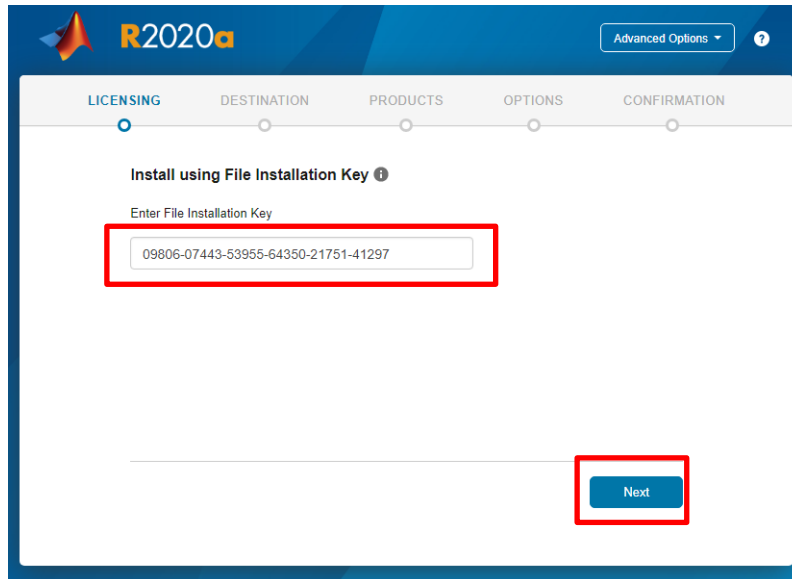

7. Choose the “I have a File Installation key”.

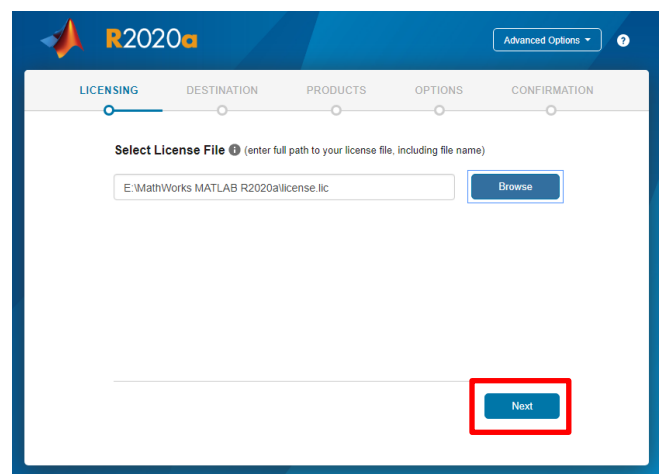

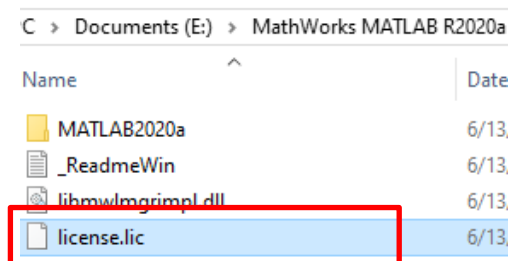

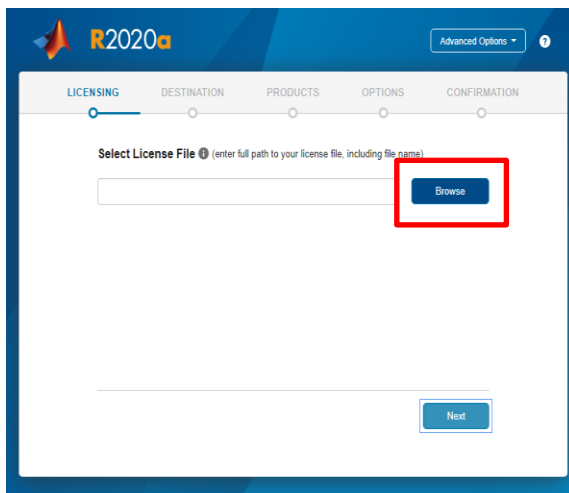

8. Accept the MATHWORKS License agreement.

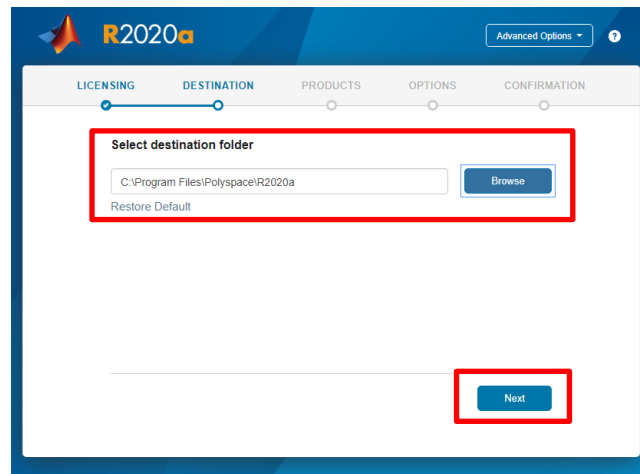

9. Now, It will ask for a license key, copy this code and paste it in that box.
09806-07443-53955-64350-21751-41297 . Then click next

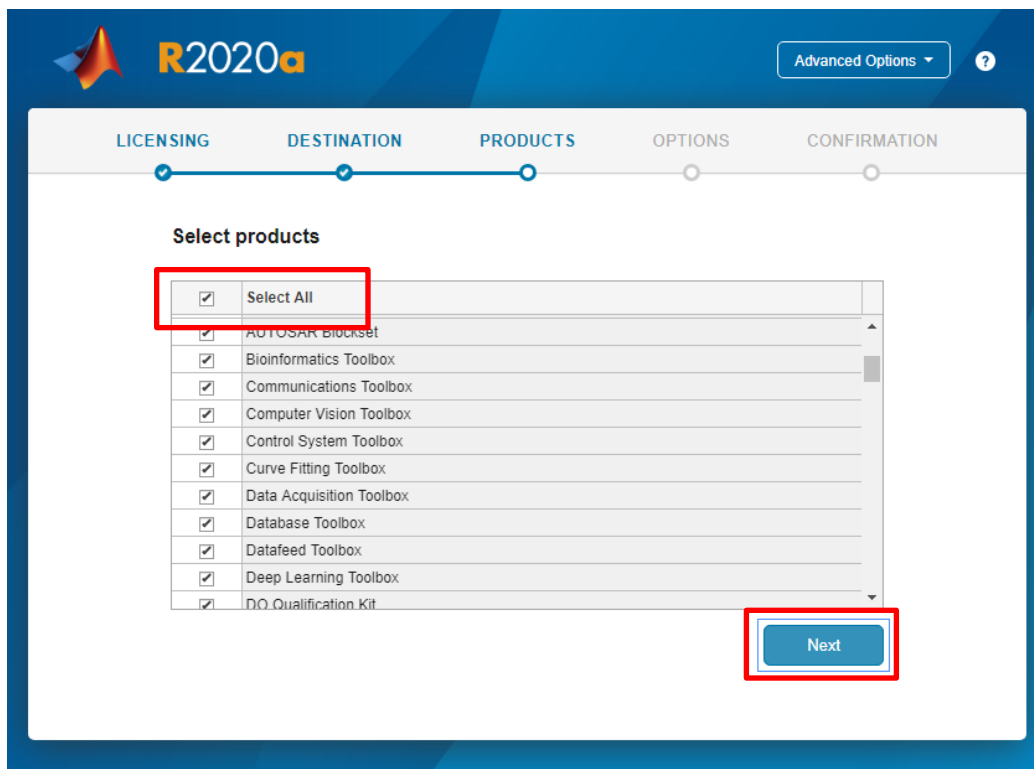

10. Now, it will ask for the license file, click on browse and go to your crack software folder and you'll see a file named "license.lic", select it. Then click next

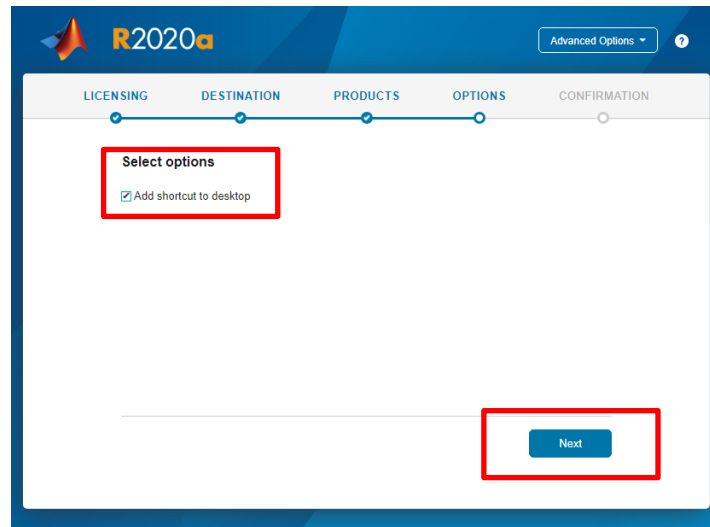

11. Select your desired folder where you want to install the MATLAB software. I'd prefer not to install it in the C drive. Use D/E/F drive. In this guide, I used F drive. Make a folder in your preferred drive, name it "Matlab202a" or any name you want. Then use the browse option and select that folder. (this folder will be your 'Installed Matlab folder')

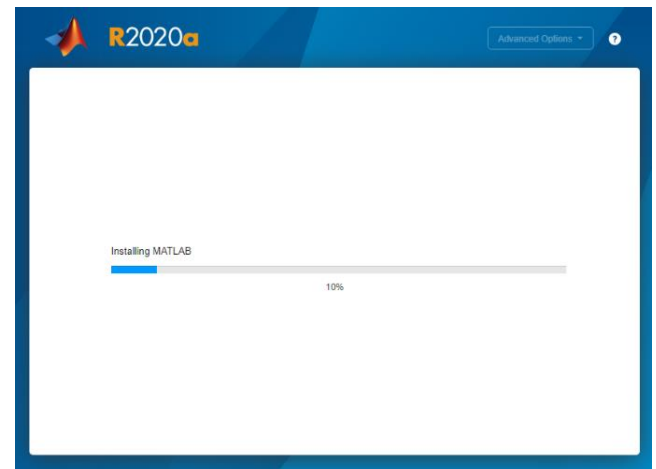

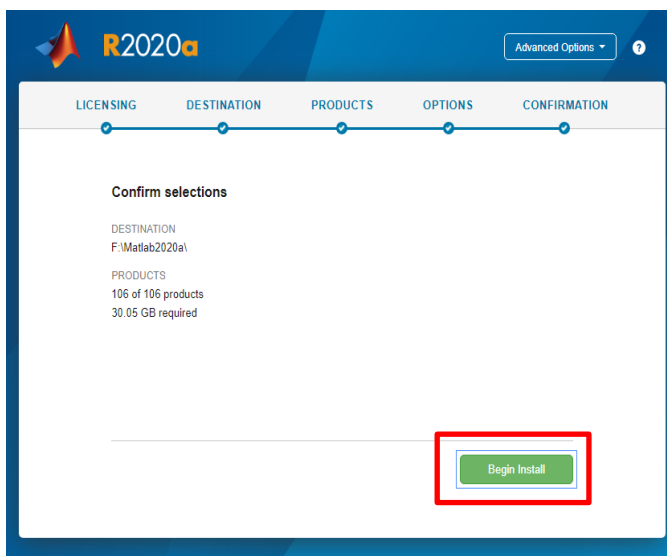

12. It will now ask to select products, I'd prefer "Select all". then click next.

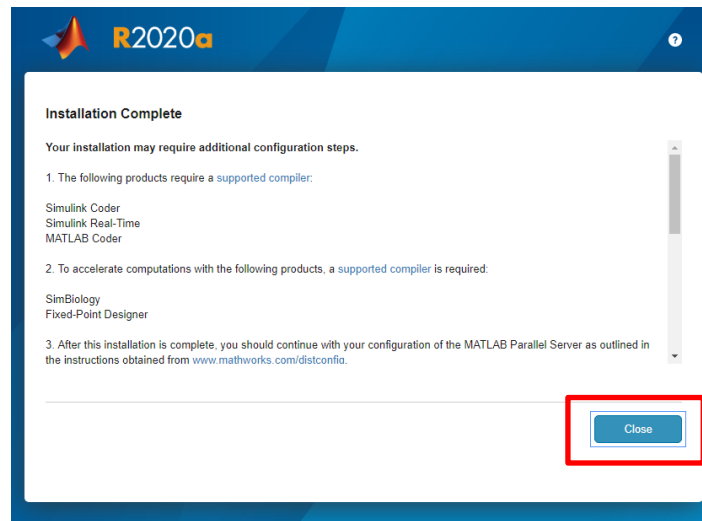

13. Now this is subjective, if you want you can “add this to desktop shortcut”, it will add a shortcut of Polyspace (a plugin for MATLAB). So, I’d suggest, don’t check the box if you don’t know anything about the polyspace. Uncheck the box and click next.

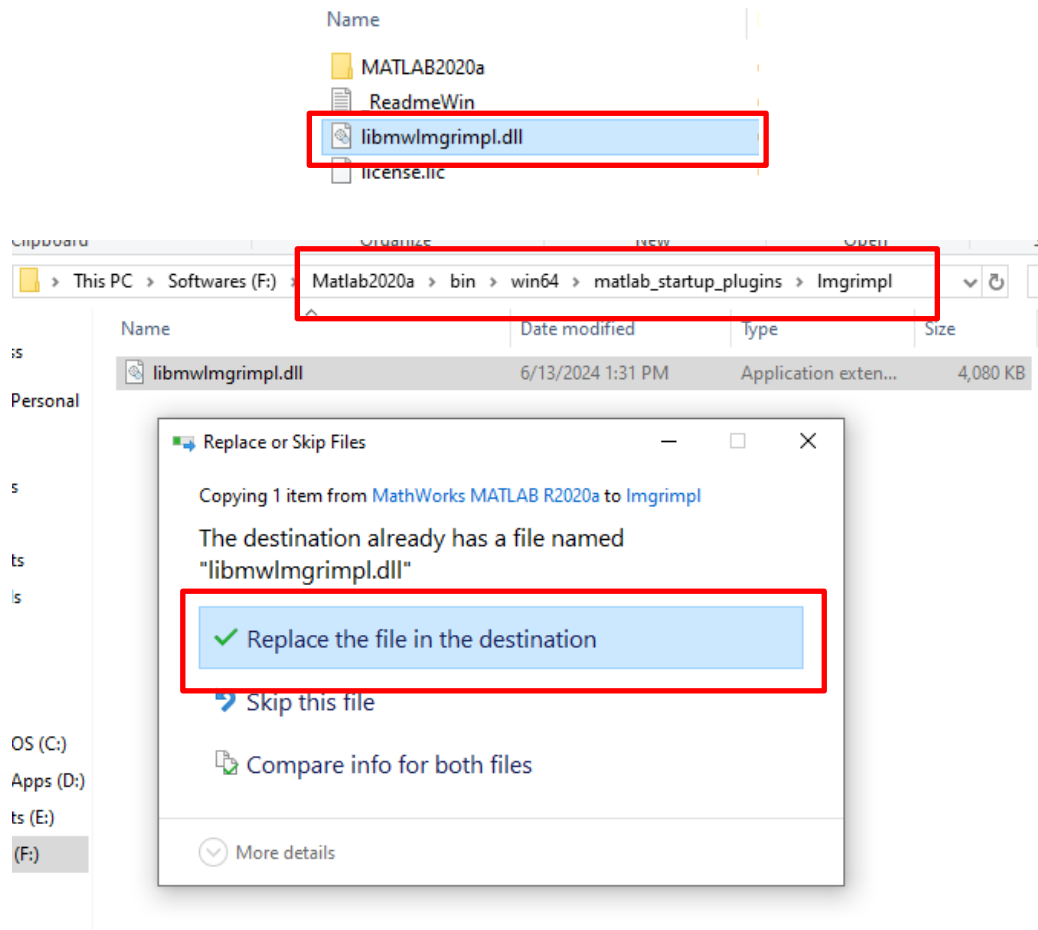

14. Click on “Begin Install”. Wait for it to finish install. (it might take 10-15mins, depending on the device you’re using). After the installation is complete you can click the close button. But there are some more steps to follow.

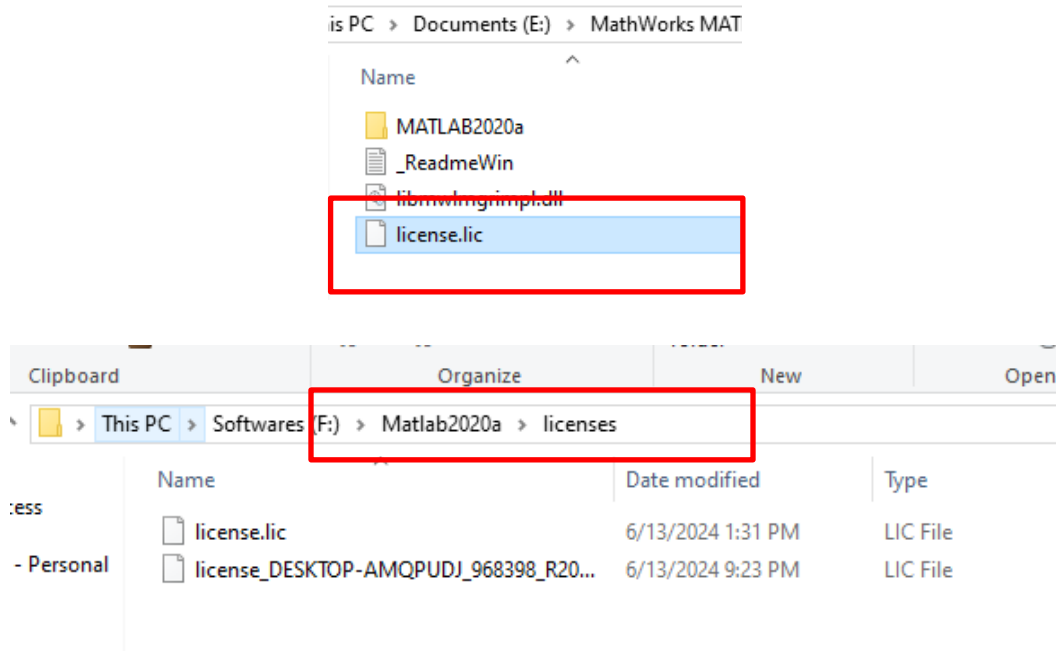

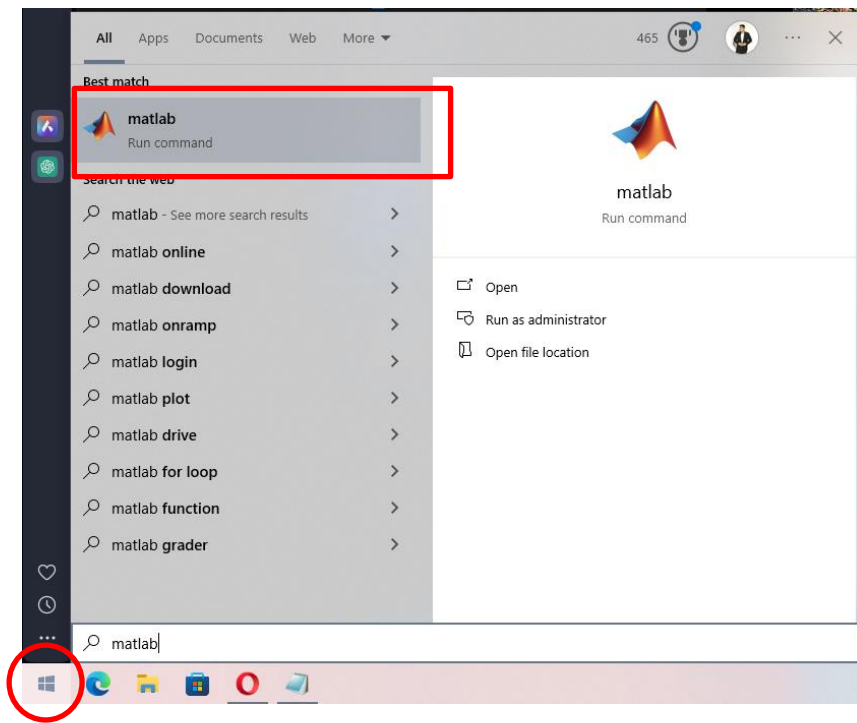

15. Now, go to your crack folder, and you'll see a file named "**libmwlmgrimpl.dll**". copy it and paste it in "<installed matlab folder>\bin\win64\matlab_startup_plugins\lmgrimpl"

16. Then again go to the crack folder, you'll see a file named “**lincese.lic**” , copy it and paste it in “<installed matlab folder>\licenses ”

17. Go to start menu and search for “MATLAB”

18. Click it. And enjoy MATLAB.
